1. Introduction

The AquaCheck Mobile Application allow users on the AquaCheckWEB system to view AquaCheck Soil Moisture Probe data. Soil moisture data is available in the form of various graphs.

The AquaCheck Mobile Application is a viewing platform only. Any changes to names or adding new profiles must be done on the main AquacheckWeb computer software program which is then synchronised with the Mobile App to show the latest changes.

2. Downloading and installing the APP

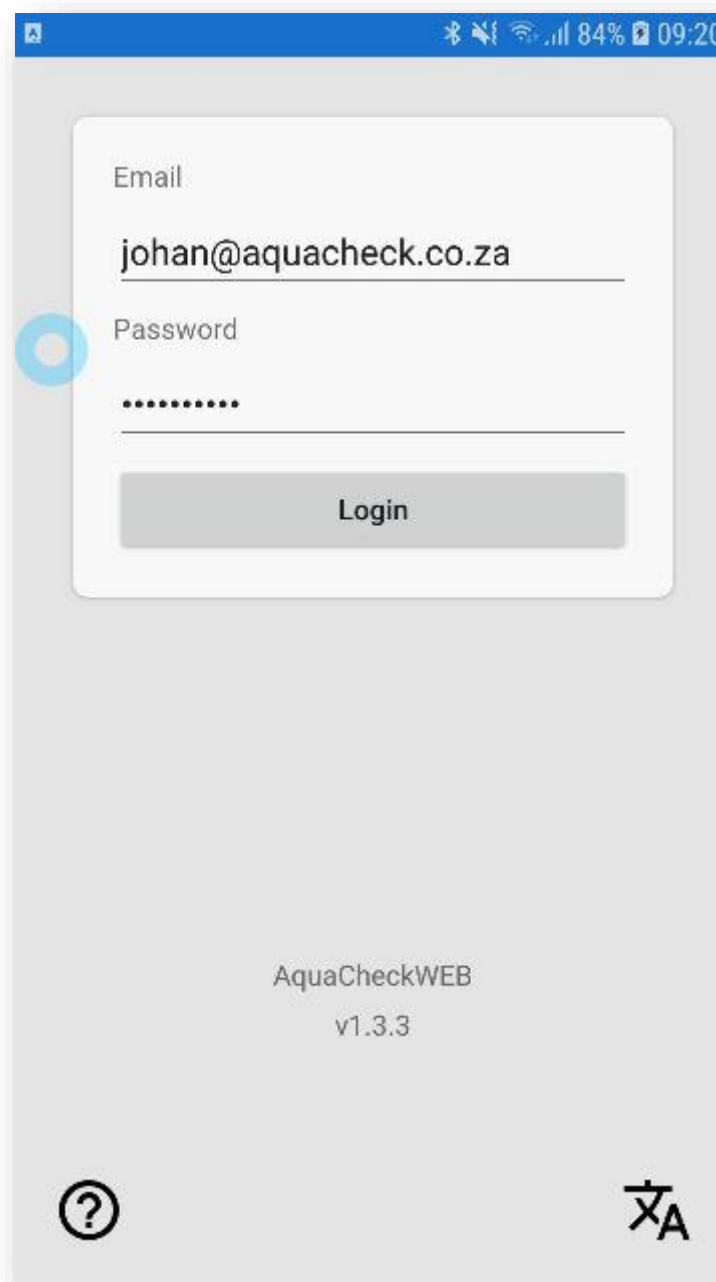

The APP can be found on Google Playstore (Android) or Apple iStore (Apple).
Simply search for AquaCheck and download the app.

3.Using the APP

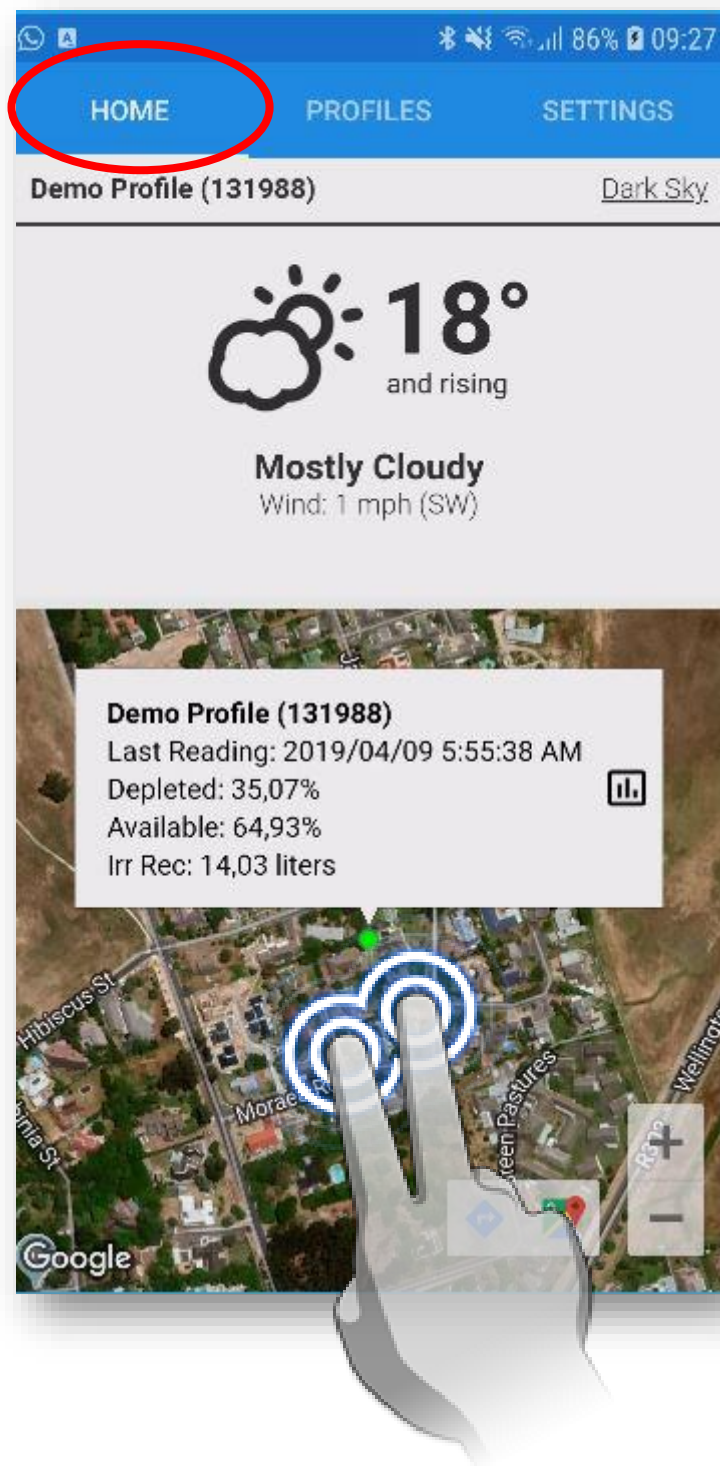

3.1 Login:

After opening the APP, the login screen will appear – only the 1st time. Use your current ACWeb login credentials (same login details as for the AquacheckWeb computer software).

3.2 Navigating:

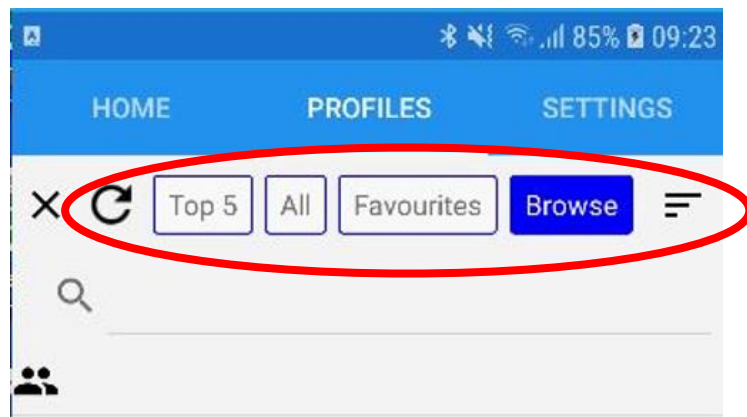

After the login process is completed, the Home Page will be displayed. By clicking on the colour dots in the Google map, a pop-up will be displayed on which you can click to open the relevant graphs.

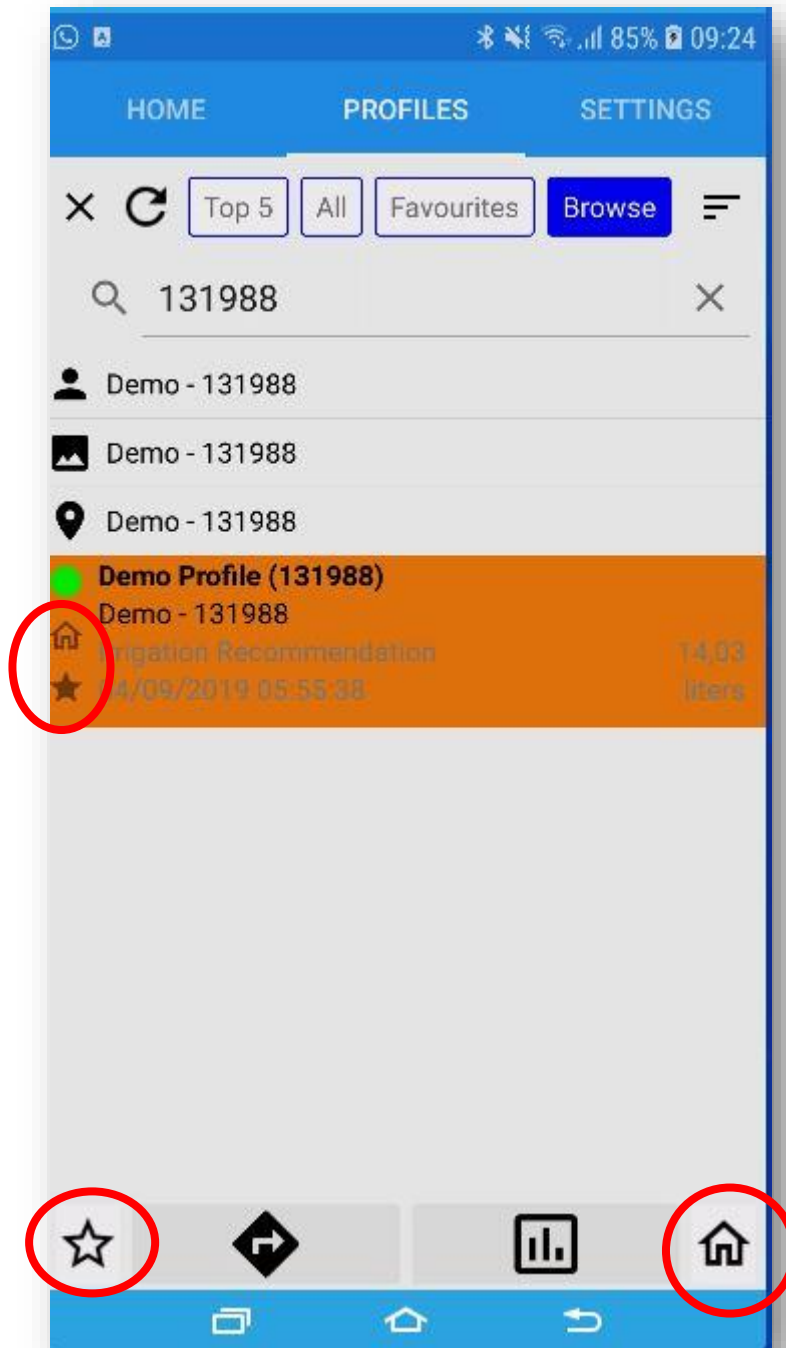

By clicking on PROFILES, the Profiles page will be displayed where selections can be made.

On the PROFILES page, search under "Top 5", "All" or "Favourite".

When selecting "Browse", you can also search for a specific profile number/name. When clicking on the result you can either add the profile as your Default home/weather profile and add it as a Favourite.

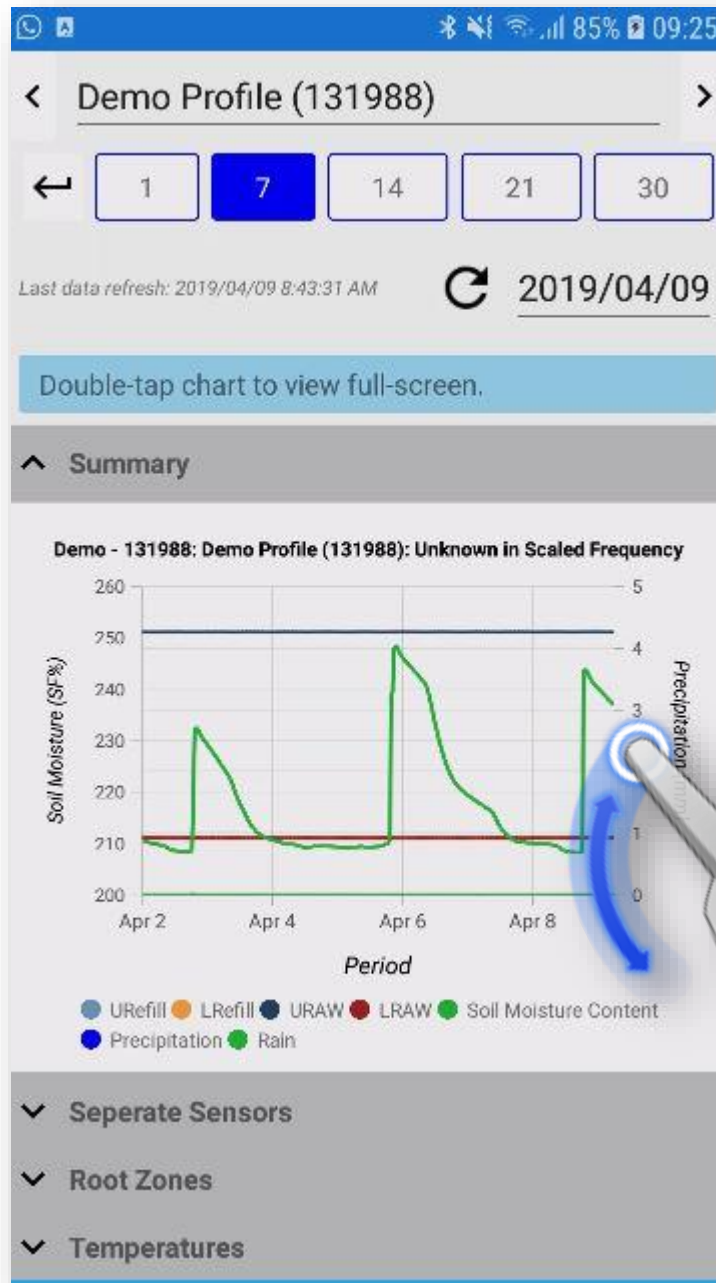

You can also navigate to the probe via Google Maps or view the graphs.

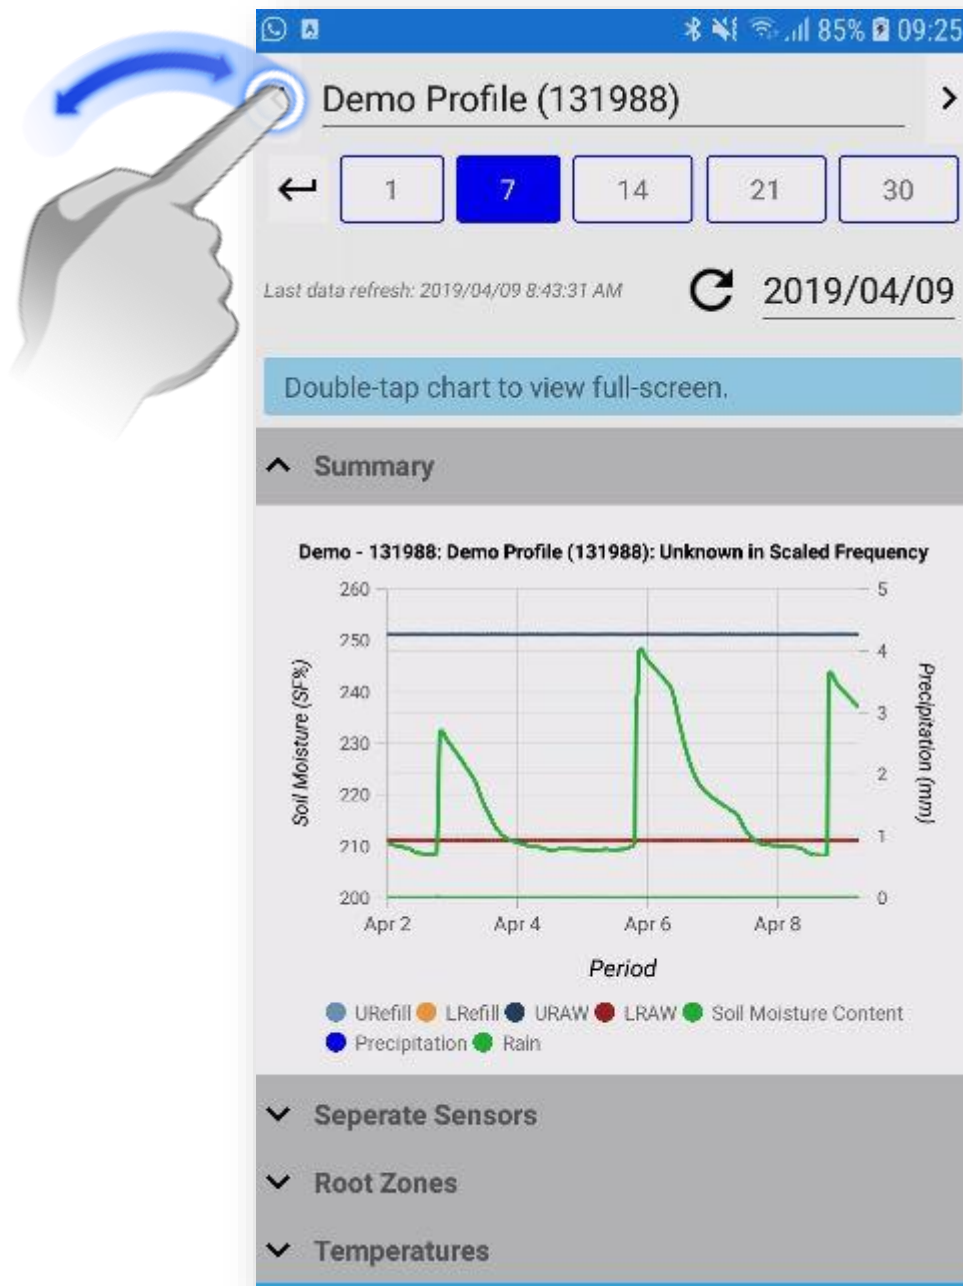

3.3 Graphs:

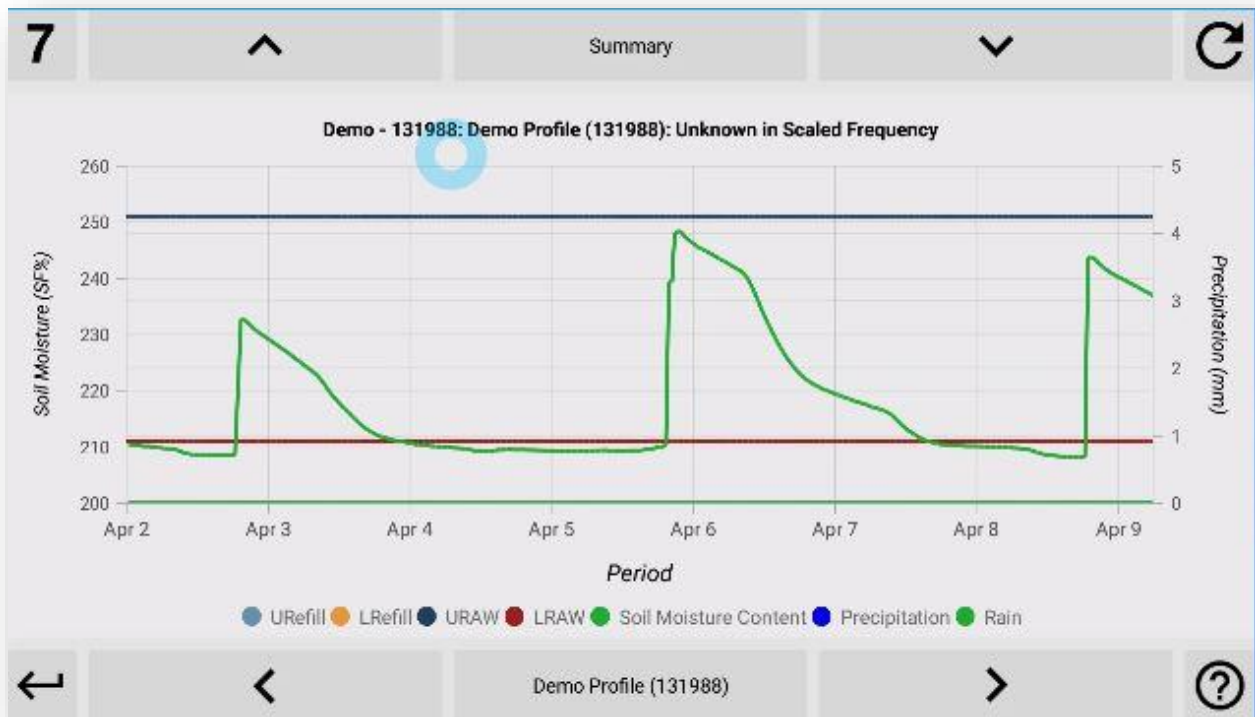

When selecting the graphs, the following screen appears. Swipe Up or Down to move between different graphs.

Swipe Left or Right to move between different profiles.

By double tapping on the graph the following full- page screen appears.

Logout

By selecting the SETTINGS tab the user will be able to logout and login as a different user. Use Logout and Reset to synchronise and update the app with changes made in the AquacheckWeb Software.
